### **Richards joins Alaska Gasline Development Corporation (AGDC)**

**April 19, 2012, Anchorage, AK** — Alaska Gasline Development Corporation (AGDC) President Dan Fauske announces Frank Richards has joined AGDC as the Pipeline Engineering Manager. Richards recently served as the deputy federal coordinator, in the Office of the Federal Coordinator, working on Alaska Natural Gas Transportation Projects.

Richards will direct the performance of a multidisciplinary pipeline engineering team for AGDC. Frank is a registered professional engineer with 25 years of Alaskan project management experience. He brings broad engineering, management, budget and legislative experience to the AGDC project. Richards spent more than 10 (ten) years in the private sector working on large-scale projects in Alaska and he spent 19 years with Alaska Department of Transportation (ADOT), overseeing Alaska's surface transportation assets and projects in support of Alaska's resource development goals.

“We are looking forward to Frank's technical expertise and industry knowledge building on the strength of the team in place at AGDC. AGDC is tasked with putting together a mega project efficiently and successfully,” Fauske said. “Frank has been involved in the project at various levels since its inception and his knowledge of the project will increase the organization's ability to achieve the project goals.”
